Experience

- **ScryAI** — Gurugram, India
  Software Engineer — *Jul 2024 – Present*
  - **Auriga-CAM Platform (0 to 1)**: Led end-to-end development of a commercial real-estate CAM analysis platform for a major US real-estate client; built the Angular UI and Node.js/Express REST APIs over PostgreSQL with normalized schemas, TypeORM migrations, seed scripts, Swagger request validation, and JWT-based auth middleware; added guest-SSO workflows to onboard users from external organizations.
  - **Database Re-architecture**: Migrated the platform's legacy MongoDB data layer to PostgreSQL and redesigned the schema to support fiscal year, scenario, and lease-version dimensions; rolled out migrations across dev and UAT environments.
  - **Real-Time Document Pipeline**: Built asynchronous lease and building document processing using RabbitMQ queues with Socket.io-driven live status updates (queued, processing, completed, failed); integrated OCR and LLM-based attribute extraction services through callback and status-polling APIs.
  - **Cloud & DevOps**: Owned Docker/Nginx deployments across Azure and Hetzner; automated GPU server start/stop around document-processing load to cut idle cloud costs; built a unified file-storage abstraction over Azure Blob Storage and AWS S3; handled SSL renewals and Grafana monitoring.
  - **Auriga-RTI Platform**: Developed features for a credit-risk-rating (CRR) news-analysis platform (Angular, Node.js, MongoDB) that clusters news articles and scores companies; built the portfolio watchlist, a reports dashboard with automated alert emails, and role-based access control for admin, approver, and analyst workflows.
  - **Hiring & Mentorship**: Conducted 30+ technical candidate interviews, evaluating full-stack and problem-solving skills and contributing to hiring decisions.
  - **Quality & Security**: Maintained zero high/critical vulnerabilities via Grype and SonarQube audits; wrote Jest unit tests with mocked repositories (80% coverage); led the Angular 15 to 20 upgrade (including Jest to Vitest migration) and delivered documentations.
- **Fundwave** — Gurugram, India
  MLOps Intern — *May 2023 – Jul 2023*
  - **Bank Reconciliation**: Built Node.js microservices for automated bank reconciliation and incremental-learning ML pipelines; documented REST APIs with OpenAPI/Swagger specifications.
- **IIITD Microbiome Lab** — New Delhi, India
  Full Stack Developer — *Mar 2023 – May 2023*
  - **Research Platform**: Shipped the lab website and an interactive research platform using ReactJS and Python/FastAPI, enabling exploration of microbial communities by functional signatures.

Projects

- **LanFlix (Flutter, Wi-Fi Direct)**: Mobile app for offline peer-to-peer video streaming up to 1080p over Wi-Fi Direct with TCP-based reliable file transfer, requiring no internet connectivity.
- **Container Runtime (Go)**: Minimal container runtime using Linux namespaces (PID, MNT, NET) and cgroups to run programs in isolated filesystems and process trees.
- **Go Compiler (Go)**: Compiler front end written in Go covering lexer, tokenizer, parser, and AST generation with a simple execution flow.
- **Rijndael AES (Python)**: FIPS-197 standard AES implementation covering key expansion and all round transformations, validated against official test vectors.

Education

- **Indraprastha Institute of Information Technology, Delhi (IIITD)** — New Delhi, India
  B.Tech in Computer Science and Engineering — *CGPA: 7.1/10* — *2020 – May 2024*

Skills

- **Languages**: JavaScript/TypeScript, Python, Go, C/C++, SQL, Java, Bash
  Frameworks: Angular, Node.js, Express, ReactJS, Socket.io
  Databases & Infra: PostgreSQL, MSSQL, MongoDB, RabbitMQ, Docker, Nginx, Azure, AWS S3
  Tools: Git, Jest, Vitest, Swagger/OpenAPI, Grype, SonarQube, Grafana, Linux
